Keys Types: Technical Worksheet

Grade 2 · Worksheet · About 25 minutes
Work with pen and paper. Use color pencils if you like. You do not need a computer or the internet.

Name: _____

Grade/Section: _____

Date: _____

How to use this worksheet

- Do the parts **in order** from top to bottom.
- Each part has a **time** so you know how long to spend.
- Read every instruction before you write. You can do this on your own.

Part 1 – What you will learn (about 3 minutes)

What you will learn: A **keyboard** has many **keys**. Keys are not all the same. Some keys type **letters**. Some type **numbers**. Some are **special keys** that do jobs like making a space or starting a new line. In this worksheet you will name and sort key types.

Do this:

1. **Name one key** you have pressed on a keyboard or tablet keyboard.

   _____

2. **Circle** one key type you already know: Letter keys · Number keys · Special keys

Part 2 – Letter keys (about 5 minutes)

Letter keys are the keys that type the alphabet (A, B, C … Z). Most of the middle of a keyboard is letter keys. You use them to write words and names.

> **Real-life scenario:** Mia wants to type her name. She finds the **M** key, then the **I** key, then the **A** key. Those are letter keys.

Discuss with a partner or reflect in writing: Why do we need many letter keys on a keyboard?

Do this: Write **L** if it is a letter key. Write **No** if it is not.

Key	L or No?
A	_____
7	_____
Space bar	_____
T	_____
Enter	_____

Part 3 – Number keys (about 5 minutes)

Number keys type the digits **0–9**. Many keyboards have a row of number keys above the letter keys. You use them for ages, dates, scores, and phone numbers.

> **Real-life scenario:** Sam writes the date for today's worksheet. He presses **1**, then **2**. Those are number keys.

Critical thinking: Can you write the number twelve with letter keys only? Why or why not?

Do this: Circle the number keys in this list.

3 · B · 0 · Enter · 9 · Space · 5

Then **write one thing** you might type with number keys *(e.g. your age or today's date)*.

Part 4 – Special keys (about 5 minutes)

Special keys do jobs that are not typing a letter or a number. Common ones:

- **Space bar** — makes a blank space between words
- **Enter** (or Return) — starts a new line
- **Backspace** — erases the last thing you typed
- **Shift** — helps make a capital letter when you hold it and press a letter key

> **Real-life scenario:** Leo typed “ilike cats” with no spaces. He puts the cursor between “i” and “like”, then taps the **space bar**. Now it reads “i like cats”.

Discuss with a partner or reflect in writing: Which special key would you use if you typed the wrong letter by mistake?

Do this: Match each job with a special key from the word bank.

Word bank: *Space bar · Enter · Backspace · Shift*

Job	Special key
Make a blank between words	_____
Start a new line	_____
Erase the last letter	_____
Help make a capital letter	_____

Part 5 – Draw and sort keys (about 5 minutes)

Do this:

1. **Draw a simple keyboard** (a few rows of keys is enough). Label at least one **letter key**, one **number key**, and one **special key**.

2. **Write one sentence** naming the three key types you labeled.

Part 6 – Check what you learned (about 2 minutes)

Checklist. Put a ✓ in the box when it is true for you.

☐ I know a **keyboard** has different **types of keys**.

☐ I can name a **letter key** (like A or M).

☐ I can name a **number key** (like 3 or 0).

☐ I know at least one **special key** (space bar, Enter, Backspace, or Shift).

☐ I can sort keys into letter, number, and special types.

When all boxes are checked, you have reviewed the main ideas from this worksheet.

Worksheet on Keys Types (Technical). Central topic: Keys types. Main technology area: Keyboard and input devices.
