Lab Rules: Technical Worksheet

Grade 4 · Worksheet · About 25 minutes
Work with pen and paper. Use color pencils if you like. You do not need a computer or the internet.

Name: _____

Grade/Section: _____

Date: _____

> **How to use this worksheet**
> - Do the parts **in order** from top to bottom.
> - Each part has a **time** so you know how long to spend.
> - Read every instruction before you write. You can do this on your own.

Part 1 – What you will learn (about 3 minutes)

What you will learn: Lab rules are clear steps for entering, using, and leaving a computer lab. They protect people and equipment. You will sort rules by type and put procedures in order.

Do this:

1. **Name one place** at school where computers are shared (lab, cart, library).

   _____

2. **Write one lab rule** you already know.

   _____

Part 2 – Why lab rules exist (about 5 minutes)

Lab rules are not random. They reduce spills, broken cables, lost work, and wasted time. A good rule tells you **what to do** and often **when** to do it.

> **Real-life scenario:** Class A rushes in, bags swing over keyboards, and drinks sit on desks. Class B enters quietly, bags stay in a marked zone, and drinks stay outside. Class B starts work five minutes sooner.

Discuss with a partner or reflect in writing: Which class followed stronger lab rules? How can you tell?

Do this: Label each rule **People**, **Equipment**, or **Login/Logout**.

Lab rule	Type
Walk—do not run—to your assigned seat	_____
Do not unplug cables without permission	_____
Log out and shut down as instructed	_____
Keep food and drinks outside the lab	_____

Part 3 – Enter and exit procedures (about 5 minutes)

A **procedure** is a set of steps in order. Entering: bag zone → seat → wait for the start signal. Exiting: save → log out → push in chair → leave equipment ready.

> **Real-life scenario:** The bell rings. Kai jumps up and leaves without logging out. The next class can see Kai's open files and cannot start their own accounts.

Critical thinking: Which exit step did Kai skip, and why does that matter?

Do this: Number these exit steps 1, 2, 3, and 4.

Step	Order (1–4)
Push in your chair and leave the desk clear	_____
Save your work	_____
Log out (or shut down) as the teacher says	_____
Check that headphones and mice are back in place	_____

Part 4 – Equipment handling rules (about 5 minutes)

Handle keyboards, mice, headphones, and screens gently. Use only the software and websites your teacher allows. Report damaged equipment instead of hiding it.

> **Real-life scenario:** A headphone cord is tangled under a chair. Instead of asking for help, a student yanks hard. The plug snaps off inside the jack.

Discuss with a partner or reflect in writing: What safer action could replace yanking?

Do this: Write **Follows rules** or **Breaks rules**.

Action	Follows or Breaks?
Ask before connecting a personal USB drive	
Change cable setups without permission	
Tell the teacher a key is stuck	
Open a game site during a research task	

Part 5 – Map the lab flow (about 5 minutes)

Do this:

1. **Sketch a simple lab** (door, bag zone, seats, teacher desk). Draw arrows for enter and exit flow. Label three rules.

2. **Write one sentence** about the rule that helps most at the start of class.

Part 6 – Check what you learned (about 2 minutes)

Checklist. Put a ✓ in the box when it is true for you.

□ I can explain why **lab rules** protect people and equipment.

□ I can sort rules as people, equipment, or login/logout.

□ I can put **exit steps** in a sensible order.

□ I know gentle ways to handle lab equipment.

□ I can map enter/exit flow and label key rules.

When all boxes are checked, you have reviewed the main ideas from this worksheet.

Worksheet on Lab Rules (Technical). Central topic: Lab rules. Main technology area: Computer lab procedures and equipment care.
