Preventive Care: Technical Worksheet

Grade 7 · Worksheet · About 25 minutes
Work with pen and paper. Use color pencils if you like. You do not need a computer or the internet.

Name: _____

Grade/Section: _____

Date: _____

> **How to use this worksheet**
> - Do the parts **in order** from top to bottom.
> - Each part has a **time** so you know how long to spend.
> - Read every instruction before you write. You can do this on your own.

Part 1 – What you will learn (about 3 minutes)

What you will learn: Preventive care means taking steps *before* a system fails—updates, backups, cleaning, and scheduled checks. It is different from **reactive care**, which starts after something already broke. In this worksheet you will compare those approaches and plan simple preventive actions.

Do this:

1. **Name one device or system** you rely on at school or home.

   _____

2. In one phrase, write a problem you want to **prevent**, not just fix later.

   _____

Part 2 – Preventive vs reactive (about 5 minutes)

Preventive actions reduce the chance of failure. **Reactive** actions respond after symptoms appear. Both matter, but preventive care often costs less time and stress when planned well.

> **Real-life scenario:** A school laptop cart skips updates for months. Suddenly many devices will not open the learning app on exam week. Another cart updates monthly and keeps a spare charger set ready.

Discuss with a partner or reflect in writing: Which cart used more preventive care? What reactive work will the first cart need now?

Do this: Label each action **P** (preventive) or **R** (reactive).

Action	P or R?
Install security updates on a schedule	_____
Replace a hard drive after it fails and files are lost	_____
Back up project folders every Friday	_____
Call support only after the printer stops mid-job	_____

Part 3 – Updates, backups, and space (about 5 minutes)

Updates patch bugs and security holes. **Backups** keep copies of important files somewhere separate. Watching **storage space** and battery health helps you spot slowdowns early. Ignoring warnings is like ignoring a car's oil light.

> **Real-life scenario:** Priya sees “storage almost full” for two weeks. She keeps downloading large videos. Then she cannot save her science report the night before it is due.

Critical thinking: Name one preventive step Priya could have taken when the warning first appeared.

Do this: Fill the table with a purpose for each preventive tool.

Tool or habit	What it helps prevent
Software update	_____
Cloud or USB backup	_____
Clearing unused large files	_____

Part 4 – Physical and scheduled checks (about 5 minutes)

Dust, loose cables, blocked vents, and frayed cords are physical risks. A **checklist on a calendar** (weekly, monthly) turns care into a routine instead of a scramble.

> **Real-life scenario:** A classroom desktop overheats because vents are packed with dust. Students notice it shuts down during long videos. Nobody had a monthly dust-check habit.

Discuss with a partner or reflect in writing: Why does a schedule help more than "we'll clean it when it feels slow"?

Do this: Design a mini checklist. Write three preventive checks and how often each should happen.

Check	How often?

Part 5 – Map a preventive plan (about 5 minutes)

Do this:

1. **Sketch a simple plan** for one device: label Update, Backup, Clean/Check, and Store/Cable care in boxes or a cycle diagram.

2. **Write one sentence** explaining which step you would do first and why.

Part 6 – Check what you learned (about 2 minutes)

Checklist. Put a ✓ in the box when it is true for you.

☐ I can explain **preventive care** versus **reactive care**.

☐ I can connect **updates**, **backups**, and **storage** habits to preventing problems.

☐ I can name physical checks (dust, cables, vents) that belong on a schedule.

☐ I can build a short preventive checklist with frequencies.

☐ I can sketch a preventive plan for one device.

When all boxes are checked, you have reviewed the main ideas from this worksheet.

Worksheet on Preventive Care (Technical). Central topic: Preventive care. Main technology area: System maintenance and reliability.
