

Benefits of Technology: Technical Worksheet

Grade 4 • Worksheet • About 25 minutes

Work with pen and paper. Use color pencils if you like. You do not need a computer or the internet.

Name: _____
Grade/Section: _____
Date: _____

How to use this worksheet

- Do the parts **in order** from top to bottom.
- Each part has a **time** so you know how long to spend.
- Read every instruction before you write. You can do this on your own.

Part 1 – What you will learn (about 3 minutes)

What you will learn: A **benefit** is a helpful result that **technology** gives people—such as learning faster, staying in touch, saving time, or staying safer. In this worksheet you will name kinds of benefits, match tools to benefits, compare **before and after** technology is used, and notice that benefits depend on **good use** and **working tools**.

Do this:

1. **Name one benefit** you got from technology today (any tool counts).

2. **Circle** one: A bicycle's main benefit is that it "uses electricity." — Yes / No

Part 2 – Kinds of benefits (about 5 minutes)

Technology can help people in different ways. Four common benefit types are:

- **Learn** — find information, practice skills, or follow lessons.
- **Communicate** — share messages, calls, or videos with others.
- **Save time / get things done** — finish tasks faster or with less effort.
- **Stay safe or healthy** — warnings, locks, lights, or tools that protect health.

Do this: Match each example to one benefit type from the word bank. Write the phrase on the line.

Word bank: Learn · Communicate · Save time / get things done · Stay safe or healthy

Example	Your answer
An online encyclopedia helps you research animals for a report	_____
A parent sends a text that you are on the way home	_____
A microwave heats lunch in two minutes instead of twenty on a stove	_____
A smoke alarm beeps when it senses smoke	_____
A classroom tablet shows a math practice game	_____

Discuss with a partner or reflect in writing: Which benefit type matters most to you at school right now? Why?

Part 3 – Before and after (about 5 minutes)

A benefit often shows up when you compare **before** (without the tool) and **after** (with the tool).

Real-life scenario: For a country report, Maria used only library books. She could find good facts, but it took a long time to search many shelves. The next year, her class also used a trusted school search tool. She still had to **choose good sources**, but she found facts faster.

Critical thinking: What improved for Maria? What still needs **human thinking** (not only the tool)?

Do this: Pick one school task. Fill in **before** and **after** when technology helps.

School task you choose	Before (without much technology)	After (with technology)
e.g. Final copy of writing	Handwrite or re-copy by hand	Type and fix mistakes easily
Your task: ____	____	____

Part 4 – Right tool for the benefit (about 5 minutes)

Different tools give different benefits. The **best** tool fits the job—not always the newest or flashiest one.

Real-life scenario: You want to tell a cousin abroad “Happy birthday” tonight. You could write a letter, make a poster, call on the phone, or use a video call. Each choice has a different benefit (speed, personal touch, seeing faces).

Discuss with a partner or reflect in writing: Why is the “coolest” tool not always the best tool for the job?

Do this: For each need, write the **best tool** from the list and **one benefit** it gives.

Tools you may use: phone call · video call · typed message · handwritten letter

Need	Best tool	One benefit it gives
Tell someone far away good news right now	_____	_____
Share a drawing you made today (photo or scan)	_____	_____
Practice spelling words with sound and pictures	_____	_____

Part 5 – Benefits need care (about 5 minutes)

Benefits do not appear by magic. Tools need **power** (electricity or batteries), **care** (charging, gentle use, updates), and **wise use** (knowing when to turn them off). A broken or misused tool may give little or no benefit.

Scenario: A class tablet will not charge. Students cannot use the homework app until it is fixed. The **benefit** of practice at home is lost until the tool works again.

Critical thinking: Name two care habits that keep technology helpful. Why is “more screen time” not always an extra benefit?

Do this:

1. **List two care habits** for school or home technology.
 1. _____
 2. _____
2. **Circle** when more screen time is *not* an extra benefit:
 - When you are too tired to sleep
 - When you already finished your homework and need rest or play outside
 - When a grown-up says screens are off for family time
 - All of the above

Part 6 – Check what you learned (about 2 minutes)

Checklist. Put a check mark in the box when it is true for you.

- ☐ I can explain what a **benefit** of technology is.
- ☐ I can name benefit types such as learn, communicate, save time, and stay safe.
- ☐ I can compare **before and after** when technology helps a task.
- ☐ I can choose a tool that fits the benefit I need.
- ☐ I know benefits need **power, care, and wise use**.

When all boxes are checked, you have reviewed the main ideas from this worksheet.
