Maintenance: Technical Worksheet

Grade 5 · Worksheet · About 25 minutes
Work with pen and paper. Use color pencils if you like. You do not need a computer or the internet.

Name: _____

Grade/Section: _____

Date: _____

> **How to use this worksheet**
> - Do the parts **in order** from top to bottom.
> - Each part has a **time** so you know how long to spend.
> - Read every instruction before you write. You can do this on your own.

Part 1 – What you will learn (about 3 minutes)

What you will learn: Maintenance means the regular care that keeps technology working—cleaning, checking cables, updating software, freeing storage, and fixing small issues early. In this worksheet you will name maintenance tasks, sort them by type, and plan a simple schedule.

Do this:

1. **Name one device** at school or home that needs regular care.

   _____

2. **Write one maintenance task** you already know for that device.

   _____

Part 2 – What maintenance includes (about 5 minutes)

Maintenance can be **physical** (dust, cables, cases) or **digital** (updates, backups, clearing space). Both kinds keep a system reliable. Skipping either kind can cause slowdowns or sudden failures.

> **Real-life scenario:** A class laptop feels hot and shuts down during videos. The vents are packed with dust. Another laptop is slow because the storage is almost full. Both need maintenance—but different kinds.

Discuss with a partner or reflect in writing: Which laptop needs physical care? Which needs digital care? Could one laptop need both?

Do this: Label each task **Physical** or **Digital**.

Maintenance task	Physical or Digital?
Wipe dust from vents with a soft brush	_____
Install a software update	_____
Copy important files to a backup drive	_____
Check that charger cables are not frayed	_____

Part 3 – Signs that maintenance is needed (about 5 minutes)

Warning signs include unusual heat, strange noises, low-storage messages, slow apps, and error pop-ups. Noticing signs early is part of good maintenance.

> **Real-life scenario:** For two weeks a classroom desktop shows "storage almost full." Students keep downloading large videos. On presentation day, the computer will not save the slides.

Critical thinking: What maintenance step could have prevented this? Write one sentence.

Do this: Match each sign with a likely maintenance action from the word bank.

Word bank: *Clear unused files · Check vents / cooling · Update or reinstall the app · Inspect / replace cable*

Sign	Likely action
"Storage almost full" message	_____
Device gets very hot and fans roar	_____
An app crashes every time it opens	_____
The charger only works if you hold the plug a certain way	_____

Part 4 – A simple maintenance schedule (about 5 minutes)

A **schedule** turns care into a habit: some tasks weekly, some monthly. Waiting until something breaks is reactive; a schedule is planned maintenance.

> **Real-life scenario:** The school laptop cart has a posted checklist: Friday = plug in all devices; monthly = wipe screens and check cases; each term = ask IT about updates.

Discuss with a partner or reflect in writing: Why might a posted schedule help more than "clean it when it feels dirty"?

Do this: Build a mini schedule for one shared device. Write three tasks and how often.

Task	How often?

Part 5 – Draw a maintenance map (about 5 minutes)

Do this:

1. **Sketch one device** and label three maintenance zones (e.g. screen, vents, software/updates, cables, storage).

2. **Write one sentence** about which zone you would check first and why.

Part 6 – Check what you learned (about 2 minutes)

Checklist. Put a ✓ in the box when it is true for you.

☐ I can explain what **maintenance** means for technology.

☐ I can sort tasks as **physical** or **digital**.

☐ I can connect warning **signs** to maintenance actions.

☐ I can build a short maintenance **schedule**.

☐ I can map maintenance zones on a device.

When all boxes are checked, you have reviewed the main ideas from this worksheet.

Worksheet on Maintenance (Technical). Central topic: Maintenance. Main technology area: Device and system care.
