Typing Logic: Technical Worksheet

Grade 3 · Worksheet · About 25 minutes
Work with pen and paper. Use color pencils if you like. You do not need a computer or the internet.

Name: _____

Grade/Section: _____

Date: _____

> **How to use this worksheet**
> - Do the parts **in order** from top to bottom.
> - Each part has a **time** so you know how long to spend.
> - Read every instruction before you write. You can do this on your own.

Part 1 – What you will learn (about 3 minutes)

What you will learn: Typing logic means using a plan when you type: home-row idea, spaces between words, capitals with Shift, and fixing mistakes with Backspace—so text is clear and readable.

Do this:

1. **Name one thing** you type at school (your name, a sentence, a list…).

   _____

2. **Circle** a goal of typing logic: Clear readable text · Typing with eyes closed for fun only · Drawing pictures

Part 2 – Spaces and word order (about 5 minutes)

Words need **spaces** between them. Letters inside a word stay together. Typing logic says: finish a word → space → next word.

> **Real-life scenario:** Tara types “Ilovemy dog” as one blob, then “I love my dog” with spaces. The second line is easy to read.

Discuss with a partner or reflect in writing: Why does a missing space confuse a reader?

Do this: Circle **Yes** or **No**.

Example	Good spacing? Circle
my cat	Yes · No
mycat	Yes · No
red ball	Yes · No

Part 3 – Capitals with Shift (about 5 minutes)

A **capital letter** often starts a sentence or a name. Hold **Shift** and press a letter key at the same time. That is typing logic for capitals—not Caps Lock for every letter.

> **Real-life scenario:** Ben wants “Maria”. He holds Shift + M, then types aria without Shift.

Critical thinking: What is wrong with leaving Caps Lock on for a whole sentence of names and normal words?

Do this:

1. **Write one name** that needs a capital letter.

   _____

2. **Circle** the better habit: Shift for one capital · Caps Lock for every letter always

Part 4 – Fix mistakes in order (about 5 minutes)

When you see a typo, move to it (or use Backspace from the end) and fix **one mistake at a time**. Random mashing of keys creates more errors.

> **Real-life scenario:** Lila typed “freind”. She uses Backspace to erase d-n-i-e-r-f and retypes “friend” carefully.

Discuss with a partner or reflect in writing: Why is slow careful fixing better than slamming many keys?

Do this: Circle **Yes** or **No**.

Action	Logical? Circle
Read the word, then Backspace the wrong letters	Yes · No
Press many random keys hoping it looks right	Yes · No
Check spaces after you fix spelling	Yes · No

Part 5 – Plan a short sentence (about 5 minutes)

Do this:

1. **Plan** a short sentence (4–6 words). Write it here first.

   _____

2. **List the steps** you will use: capitals, spaces, check spelling.

   _____

Optional: Draw the keys you need for the first word of your sentence (simple boxes are fine).

Part 6 – Check what you learned (about 2 minutes)

Checklist. Put a ✓ in the box when it is true for you.

□ I know **typing logic** means having a plan when I type.

□ I put **spaces** between words.

□ I can use **Shift** for a capital letter.

□ I fix mistakes **carefully**, one at a time.

□ I can plan a short sentence before typing.

When all boxes are checked, you have reviewed the main ideas from this worksheet.

Worksheet on Typing Logic (Technical). Central topic: Typing logic. Main technology area: Keyboard skills.
