Efficiency: Technical Worksheet

Grade 5 · Worksheet · About 25 minutes
Work with pen and paper. Use color pencils if you like. You do not need a computer or the internet.

Name: _____

Grade/Section: _____

Date: _____

> **How to use this worksheet**
> - Do the parts **in order** from top to bottom.
> - Each part has a **time** so you know how long to spend.
> - Read every instruction before you write. You can do this on your own.

Part 1 – What you will learn (about 3 minutes)

What you will learn: Efficiency means getting good results with less wasted time and effort—using the right tools, shortcuts, folders, and steps—without rushing so much that you create errors.

Do this:

1. **Name a school computer task** that sometimes feels slow.

   _____

2. **Circle** true efficiency: Smart steps + accuracy · Only speed with many mistakes

Part 2 – Speed vs accuracy (about 5 minutes)

Going faster is not efficient if you must redo the work. True efficiency balances **speed** and **accuracy**.

> **Real-life scenario:** Two students write the same paragraph. One finishes first with five typos and spends ten minutes fixing. The other types a bit slower and is done once.

Discuss with a partner or reflect in writing: Who used time more efficiently? Why?

Do this: Circle **Often** or **Rarely**.

Approach	More efficient?
Plan headings, then type	Often · Rarely
Type anything, fix chaos later always	Often · Rarely
Save early so you do not lose work	Often · Rarely

Part 3 – Tools that save steps (about 5 minutes)

Efficiency tools include **shortcuts**, clear **file names**, folders, templates, and Find (Ctrl+F). Each removes repeated hunting.

> **Real-life scenario:** Aya renames “asdf.docx” to “Science-Lab-Nov6.docx” and saves it in Science/. Next week she finds it in seconds.

Critical thinking: How does a clear file name save future time?

Word bank: *Shortcut · Clear file name · Folder · Find/search*

Do this: Fill from the word bank (one tool may fit more than one row—pick a strong fit).

Situation	Best efficiency tool
Jump to a word in a long doc	_____
Open last week’s lab notes quickly	_____
Copy a quote without menus	_____

Part 4 – Reduce context switching (about 5 minutes)

Jumping between many tabs and chats wastes focus. Efficiency improves when you finish one small goal before switching.

> **Real-life scenario:** Noah writes one sentence, checks messages, opens five tabs, forgets his sentence, and restarts.

Discuss with a partner or reflect in writing: What is one way to protect focus for ten minutes?

Do this:

1. **Write a 10-minute plan** for one homework task (3 steps).

---

2. **Circle** an efficiency habit: Close extra tabs first · Open every site “just in case”

Part 5 – Efficiency sketch (about 5 minutes)

Do this: Draw a before/after: messy desktop vs organized folders + one shortcut you will use.

Write one efficiency goal for this week.

Part 6 – Check what you learned (about 2 minutes)

Checklist. Put a ✓ in the box when it is true for you.

□ I know **efficiency** balances speed and accuracy.

□ I can name tools that save steps (shortcuts, names, folders, Find).

□ I know messy switching wastes time.

□ I can plan a short focused work block.

□ I set one efficiency goal.

When all boxes are checked, you have reviewed the main ideas from this worksheet.

Worksheet on Efficiency (Technical). Central topic: Efficiency. Main technology area: Productive computer use.
