Workflow: Technical Worksheet

Grade 6 · Worksheet · About 25 minutes
Work with pen and paper. Use color pencils if you like. You do not need a computer or the internet.

Name: _____

Grade/Section: _____

Date: _____

> **How to use this worksheet**
> - Do the parts **in order** from top to bottom.
> - Each part has a **time** so you know how long to spend.
> - Read every instruction before you write. You can do this on your own.

Part 1 – What you will learn (about 3 minutes)

What you will learn: A **workflow** is an ordered set of steps to complete a digital task—from gather → draft → check → save/share. Good workflows reduce mistakes and lost files.

Do this:

1. **List a multi-step computer task** you do (essay, slideshow, data table…).

   _____

2. **Circle** what a workflow provides: Clear order of steps · Random clicking · Ignoring saves

Part 2 – Inputs, process, output (about 5 minutes)

Every workflow has **inputs** (files, notes, data), a **process** (edit, format, calculate), and an **output** (final file, print, upload). Naming each part clarifies the plan.

> **Real-life scenario:** For a science report: inputs = lab notes + images; process = write and insert figures; output = PDF in the class folder.

Discuss with a partner or reflect in writing: What goes wrong if you start formatting before you have your facts?

Do this: Write a short example in each row.

Part	Example for a slideshow
Input	
Process	
Output	

Part 3 – Checkpoints and saves (about 5 minutes)

Build **checkpoints**: after research, after draft, after peer check. Save with versions (v1, v2) or clear dates so you can roll back.

> **Real-life scenario:** Elena overwrites her only file with a bad edit and has no earlier copy. A simple “Essay-v1” backup would have helped.

Critical thinking: Why are checkpoints more than “save at the very end”?

Do this:

1. **Design 3 checkpoints** for writing a one-page report.

2. **Circle** better naming: Project-v2-Nov6 · finalfinalREAL.docx

Part 4 – Bottlenecks (about 5 minutes)

A **bottleneck** is a step that delays everything (waiting for a login, missing image, unclear instructions). Spotting bottlenecks lets you reorder or prepare earlier.

> **Real-life scenario:** The class cannot finish posters because the shared image folder was never uploaded. Design waits on media.

Discuss with a partner or reflect in writing: How could the workflow move image gathering earlier?

Do this: Mark Yes or No and be ready to explain.

Step	Possible bottleneck? Yes/No
Waiting for teacher feedback before any drafting	
Gathering citations before writing quotes	
Exporting PDF after spellcheck	

Part 5 – Draw your workflow (about 5 minutes)

Do this: Draw a 5-box workflow for a homework task (arrows between boxes).

Label one checkpoint where you will save a version.

Part 6 – Check what you learned (about 2 minutes)

Checklist. Put a ✓ in the box when it is true for you.

☐ I can define a **workflow** as ordered steps.

☐ I can name **input, process, output**.

☐ I plan **checkpoints** and sensible saves.

☐ I can spot a **bottleneck**.

☐ I can diagram a simple workflow.

When all boxes are checked, you have reviewed the main ideas from this worksheet.

Worksheet on Workflow (Technical). Central topic: Workflow. Main technology area: Process design for digital tasks.
