Precision: Technical Worksheet

Grade 3 · Worksheet · About 25 minutes

Work with pen and paper. Use color pencils if you like. You do not need a computer or the internet.

Name: _____

Grade/Section: _____

Date: _____

How to use this worksheet

- Do the parts **in order** from top to bottom.
- Each part has a **time** so you know how long to spend.
- Read every instruction before you write. You can do this on your own.

Part 1 – What you will learn (about 3 minutes)

What you will learn: Precision means doing something exactly, not just roughly. With a mouse, precision means putting the pointer on the right spot and clicking exactly what you want.

Do this:

1. **Write** one task where small mistakes matter (for example, clicking a tiny button).

   _____

2. **Circle** what precision means: Exact · Roughly

Part 2 – Small targets (about 5 minutes)

Small buttons and links are hard to click. We slow down and use small hand movements to be **precise**.

> **Real-life scenario:** Nora tries to click a tiny close (X) button. She slows down and hits it on the first try.

Discuss with a partner or reflect in writing: Why does slowing down help with small targets?

Do this: Circle the easier target.

Target	Easier to click?
A large Play button	Big · Small
A tiny X in the corner	Big · Small
A big picture	Big · Small
A thin line	Big · Small

Part 3 – Tools that help precision (about 5 minutes)

Computers offer helps: **zoom** makes things bigger, **arrow keys** move a little at a time, and **mouse speed** settings change how far the pointer goes.

> **Real-life scenario:** Omar zooms to 200% so he can place a shape exactly on the line.

Critical thinking: Which help would you choose to place a tiny picture exactly?

Word bank: *Zoom · Arrow keys · Mouse speed · Grid*

Do this: Choose the best help.

Problem	Tool
Text is too small to click	_____
Move a shape one tiny step	_____
The pointer is too fast	_____

Part 4 – Checking your work (about 5 minutes)

Precision also means checking. Look at the result. Did you click the right item? Undo (Ctrl+Z) fixes mistakes.

> **Real-life scenario:** Ivy selects the wrong file. She sees it, presses Ctrl+Z, and tries again.

Discuss with a partner or reflect in writing: What can you do after a mistake?

Do this:

1. **List** two ways to check your work.

   ___

2. **Circle** the habit that supports precision: Look before you click · Click first, look later

Part 5 – Precision sketch (about 5 minutes)

Do this: Draw a mouse pointer on a tiny button. Show how zoom makes it larger.

Write one thing you will do this week to be more precise.

Part 6 – Check what you learned (about 2 minutes)

Checklist. Put a ✓ in the box when it is true for you.

☐ I know **precision** means exact.

☐ I can use **zoom** or slower movements.

☐ I can name a tool that helps (arrow keys, mouse speed).

☐ I know to **check** my work.

☐ I know **undo** fixes mistakes.

When all boxes are checked, you have reviewed the main ideas from this worksheet.

Worksheet on Precision (Technical). Central topic: Precision with the mouse and keyboard. Main technology area: Computers (input devices).
