Interaction Design: Technical Worksheet

Grade 7 · Worksheet · About 25 minutes

Work with pen and paper. Use color pencils if you like. You do not need a computer or the internet.

Name: _____

Grade/Section: _____

Date: _____

How to use this worksheet

- Do the parts **in order** from top to bottom.
- Each part has a **time** so you know how long to spend.
- Read every instruction before you write. You can do this on your own.

Part 1 – What you will learn (about 3 minutes)

What you will learn: Interaction design is planning how a person and a digital product communicate: what the user does (**input**) and how the product responds (**feedback**).

Do this:

1. **Name** one device you use daily and one action you take on it.

   _____

2. **Circle** the part of design that shows a result after you act: Feedback · Input only

Part 2 – Input and feedback (about 5 minutes)

Every interaction has an **action** (tap, click, type) and a **response** (a sound, a color change, a message). Clear feedback tells users that the system understood them.

> **Real-life scenario:** Dana taps Send. The button turns gray and shows “Sending…” then “Sent ✓”.

Discuss with a partner or reflect in writing: What if there were no feedback after tapping Send?

Do this: Circle **Feedback** or **Not feedback**.

Response	Type
Button changes color when pressed	Feedback · Not feedback
The screen stays blank	Feedback · Not feedback
A loading bar appears	Feedback · Not feedback
A “Saved” message	Feedback · Not feedback

Part 3 – Affordances and signifiers (about 5 minutes)

An **affordance** is what an object lets you do. A **signifier** is a clue that shows it, like a raised button or an underline on a link.

> **Real-life scenario:** A flat gray label looks like text. A shaded rectangle looks like a button.

Critical thinking: How do signifiers prevent confusion?

Word bank: *Button shape* · *Underline* · *Arrow icon* · *Slider*

Do this: Choose the clue that fits.

Action	Signifier
Click a link	_____
Press to submit	_____
Drag to change volume	_____

Part 4 – Error prevention (about 5 minutes)

Good design prevents mistakes with **confirmations**, **undo**, and **clear labels**.

> **Real-life scenario:** A message asks “Delete this file? Yes / No” before removing it.

Discuss with a partner or reflect in writing: When is a confirmation helpful, and when can it be annoying?

Do this:

1. **Write** one way a form can prevent errors.

   _____

2. **Circle** the better design: Warn before deleting · Delete instantly with no undo

Part 5 – Interaction sketch (about 5 minutes)

Do this: Draw a screen of a simple app with a button and a feedback message after it is pressed.

Write one improvement for the interaction.

Part 6 – Check what you learned (about 2 minutes)

Checklist. Put a ✓ in the box when it is true for you.

☐ I know **input** and **feedback**.

☐ I can name **affordance** and **signifier**.

☐ I know ways to prevent **errors**.

☐ I can describe an interaction flow.

☐ I can sketch a simple screen.

When all boxes are checked, you have reviewed the main ideas from this worksheet.

Worksheet on Interaction Design (Technical). Central topic: How people interact with digital products. Main technology area: User interfaces and design.
