Usability: Technical Worksheet

Grade 8 · Worksheet · About 25 minutes

Work with pen and paper. Use color pencils if you like. You do not need a computer or the internet.

Name: _____

Grade/Section: _____

Date: _____

> **How to use this worksheet**
>
> - Do the parts **in order** from top to bottom.
> - Each part has a **time** so you know how long to spend.
> - Read every instruction before you write. You can do this on your own.

Part 1 – What you will learn (about 3 minutes)

What you will learn: Usability measures how easy and pleasant it is to use a product. Common usability goals are being **learnable**, **efficient**, **memorable**, **error-tolerant**, and **satisfying**.

Do this:

1. **Name** one app or website that is easy to use, and one that is hard.

   _____

2. **Circle** the usability goal that means “easy to learn”: Learnability · Color

Part 2 – Usability goals (about 5 minutes)

Five goals guide usability: **learnability** (easy to learn), **efficiency** (fast to use), **memorability** (easy to remember), **errors** (few and easy to fix), and **satisfaction** (pleasant).

> **Real-life scenario:** Kai opens a new app and completes the task in one minute without help.

Discuss with a partner or reflect in writing: Which goals does Kai's experience show?

Do this: Match each situation with a goal.

Situation	Goal
A new user finishes without help	Learnability · Efficiency · Errors
A frequent user finishes in few steps	Learnability · Efficiency · Errors
A mistake is fixed with Undo	Learnability · Efficiency · Errors

Part 3 – Testing usability (about 5 minutes)

A **usability test** has a user try tasks while observers note problems. We measure **time**, **success**, and **mistakes**.

> **Real-life scenario:** Five students test a school website. Three cannot find the schedule.

Critical thinking: What would you change after seeing this result?

Word bank: *Task* · *Observer* · *Success rate* · *Time*

Do this: Complete each description.

Description	Term
A job given to the tester	_____
Person who watches and notes	_____
Percentage who finish the task	_____

Part 4 – Improving a design (about 5 minutes)

After testing, designers fix the biggest problems first. Small changes, like clearer labels, can help a lot.

> **Real-life scenario:** The schedule link is renamed from “Resources” to “Class Schedule.” More students find it.

Discuss with a partner or reflect in writing: How do you decide which problem to fix first?

Do this:

1. **Write** one usability problem you have seen and a fix.

   ---

2. **Circle** the better label: Class Schedule · Resources & Misc.

Part 5 – Usability sketch (about 5 minutes)

Do this: Draw a before/after of a screen where you improved one label or button.

Write the usability goal your change supports.

Part 6 – Check what you learned (about 2 minutes)

Checklist. Put a ✓ in the box when it is true for you.

☐ I know five **usability goals**.

☐ I can explain a **usability test**.

☐ I can measure time and success.

☐ I can suggest a fix.

☐ I can compare two designs.

When all boxes are checked, you have reviewed the main ideas from this worksheet.

Worksheet on Usability (Technical). Central topic: Usability of digital products. Main technology area: User experience and evaluation.
