UX Evaluation: Technical Worksheet

Grade 9 · Worksheet · About 25 minutes

Work with pen and paper. Use color pencils if you like. You do not need a computer or the internet.

Name: _____

Grade/Section: _____

Date: _____

> **How to use this worksheet**
>
> - Do the parts **in order** from top to bottom.
> - Each part has a **time** so you know how long to spend.
> - Read every instruction before you write. You can do this on your own.

Part 1 – What you will learn (about 3 minutes)

What you will learn: UX evaluation is the process of checking how well a product works for real users. Evaluators use **observation**, **surveys**, **heuristics**, and **metrics** to find problems and decide on improvements.

Do this:

1. **Name** one product you would like to evaluate and one question you would ask users.

   _____

2. **Circle** the method that watches a user perform a task: Observation · Advertising

Part 2 – Evaluation methods (about 5 minutes)

Common methods: **usability testing** (watch users try tasks), **surveys** (ask opinions), **heuristic evaluation** (experts check rules of good design), and **analytics** (data about clicks and time).

> **Real-life scenario:** A team watches 5 students use a library app and notes where each hesitates.

Discuss with a partner or reflect in writing: What can observation show that a survey might miss?

Do this: Match each method with its strength.

Method	Strength
Usability test	Real behavior · Opinions · Expert rules
Survey	Real behavior · Opinions · Expert rules
Heuristic evaluation	Real behavior · Opinions · Expert rules

Part 3 – Nielsen heuristics (about 5 minutes)

Experts use **heuristics**, such as *visibility of system status*, *error prevention*, *consistency*, and *help users recover from errors*.

> **Real-life scenario:** A site shows no progress bar during upload. Users do not know if it works.

Critical thinking: Which heuristic is broken here?

Word bank: *Visibility of status* · *Consistency* · *Error prevention* · *Recovery*

Do this: Choose the heuristic being broken.

Problem	Heuristic
Upload shows no progress	_____
Buttons look different on every page	_____
A delete has no undo	_____

Part 4 – Reporting results (about 5 minutes)

A good report lists problems, **severity** (how bad), evidence, and a recommended fix.

> **Real-life scenario:** The report says: “3 of 5 users could not find Search. Severity: high. Fix: move it to the top.”

Discuss with a partner or reflect in writing: Why include evidence, not just opinions?

Do this:

1. **Write** one usability finding in this style: problem, evidence, fix.

   ---

2. **Circle** the stronger finding: “4 of 5 users missed the button” · “I do not like it”

Part 5 – Evaluation sketch (about 5 minutes)

Do this: Draw a table with three problems, their severity (high/medium/low), and a fix.

Write which problem you would fix first and why.

Part 6 – Check what you learned (about 2 minutes)

Checklist. Put a ✓ in the box when it is true for you.

☐ I know four **evaluation methods**.

☐ I can name **heuristics**.

☐ I can rate **severity**.

☐ I can write a finding with **evidence**.

☐ I can recommend a fix.

When all boxes are checked, you have reviewed the main ideas from this worksheet.

Worksheet on UX Evaluation (Technical). Central topic: Evaluating user experience. Main technology area: User experience (UX) research.
