Troubleshooting Steps: Technical Worksheet

Grade 6 · Worksheet · About 25 minutes
Work with pen and paper. Use color pencils if you like. You do not need a computer or the internet.

Name: _____

Grade/Section: _____

Date: _____

How to use this worksheet

- Do the parts **in order** from top to bottom.
- Each part has a **time** so you know how long to spend.
- Read every instruction before you write. You can do this on your own.

Part 1 – What you will learn (about 3 minutes)

What you will learn: Troubleshooting means using clear steps to find and fix a technology problem. You notice the **symptom** (what you see), gather clues, try safe checks, and know when to restart or ask for help. In this worksheet you will practice an ordered troubleshooting process.

Do this:

1. **Name one tech problem** you have seen (app freeze, no sound, blank screen, no Wi-Fi).

   _____

2. **Write the first thing** you or someone else tried.

   _____

Part 2 – A simple step sequence (about 5 minutes)

A useful order is: **Observe** → **Describe** → **Check basics** → **Try one change** → **Test** → **Ask for help** if needed. Jumping around or changing many things at once makes it hard to know what worked.

> **Real-life scenario:** Maya's tablet will not play video sound. She turns the volume up, then toggles mute, then plugs in headphones—one check at a time. She discovers mute was on. Her friend Sam taps random settings and still does not know why sound returned.

Discuss with a partner or reflect in writing: Why does trying *one* change at a time help more than tapping many settings at once?

Do this: Number these steps in a smart order (1–5).

Action	Order (1–5)
Ask a teacher or IT if the problem remains	_____
Notice and write what is wrong (symptom)	_____
Test whether the change fixed it	_____
Check basics (power, cables, volume, Wi-Fi icon)	_____
Try one safe change (unmute, reconnect cable)	_____

Part 3 – Symptoms and basic checks (about 5 minutes)

A **symptom** is what you observe (“no picture,” “spinning wheel,” “error message”). Basic checks include power, cables, volume, storage warnings, and whether the problem is on one device or many. Write error words down—they are clues.

> **Real-life scenario:** A classroom projector shows “No Signal.” The laptop is on. The HDMI cable looks loose at the projector end. Another student says, “The projector is broken,” without checking the cable.

Critical thinking: What symptom should you write first, and which basic check comes next?

Do this: Match each symptom with a good first check from the word bank.

Word bank: *Check mute / volume · Check power light / plug · Check Wi-Fi icon / network · Check cable / input source*

Symptom	Good first check
Screen is totally dark; no lights	
Video plays but no sound	
“No Signal” on the projector	
Webpage will not load; other apps open	

Part 4 – Restart, document, escalate (about 5 minutes)

Restarting can clear temporary glitches, but it is not the only step—and it is not safe when you smell smoke or see sparks. **Document** what you tried. **Escalate** means asking a trusted adult or IT when the problem is risky, repeats, or is beyond what you can fix safely.

> **Real-life scenario:** An app freezes once with no smell or heat. Restarting fixes it. Later, the same error code appears every morning. Another day, a charger tip sparks when plugged in.

Discuss with a partner or reflect in writing: When is restart enough, and when should you stop and get help?

Do this: Choose the best action: **Restart**, **Document & report**, or **Stop & get help**.

Situation	Best action
One frozen app; device feels normal	_____
Same error code every day after login	_____
Burning smell or sparks at the plug	_____

Part 5 – Draw a troubleshooting flow (about 5 minutes)

Do this:

1. **Sketch a flow** with boxes: Observe → Describe → Check basics → One change → Test → Fix or Ask for help.

2. **Circle the step** you most often skip, and write why it matters.

_____

_____

Part 6 – Check what you learned (about 2 minutes)

Checklist. Put a ✓ in the box when it is true for you.

□ I can explain what **troubleshooting** means in my own words.

□ I can put troubleshooting actions in a sensible **order**.

□ I can connect a **symptom** to a basic first check.

□ I know when to **restart**, when to **document**, and when to get help.

□ I can sketch a simple troubleshooting flow.

When all boxes are checked, you have reviewed the main ideas from this worksheet.

Worksheet on Troubleshooting Steps (Technical). Central topic: Troubleshooting steps. Main technology area: Problem-solving and device support.
